Tbilisi State University, Tbilisi - *Bachelor's Degree*

Computer Science

2022 - 2026

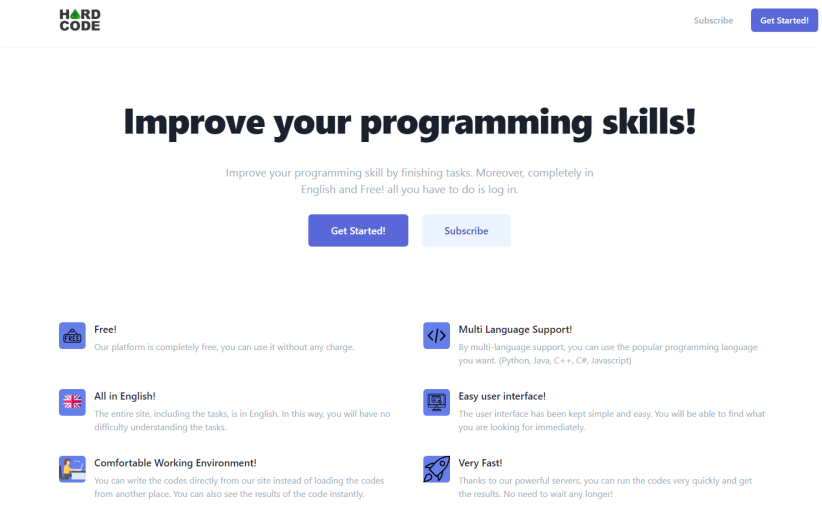
PROJECTS

HardCode (click to see source code)

A platform where users can improve their programming skills by solving tasks. They solve various tasks in different programming languages and earn experience points.

Frontend: RazzleJS (React), TailwindCSS, Redux.

Backend: Express, GraphQL



[Personal Blog (click to see source code)]

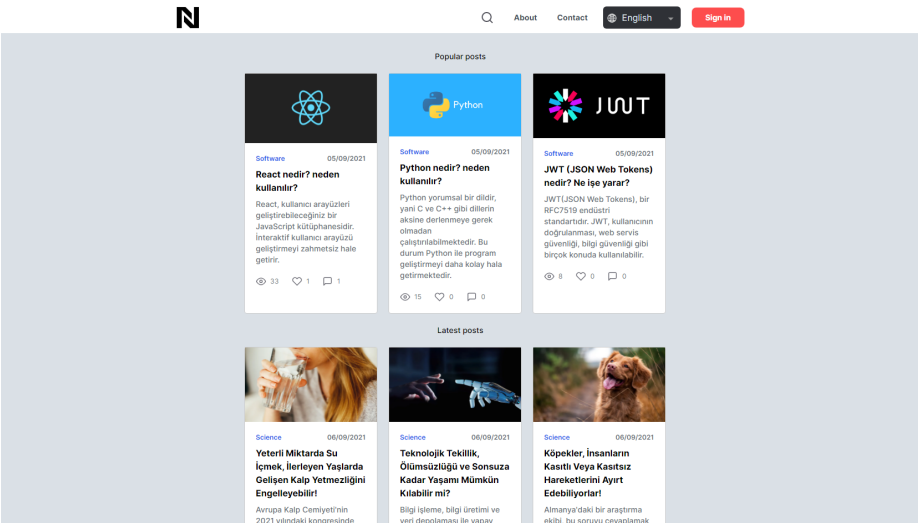
Features:

1. You can login with Google, Twitter and GitHub accounts.
2. Multi-language support. (i18n)
3. Posts are divided into categories. (game, mobile, software etc)
4. You can leave comments on posts and like them.
5. Voting feature on posts.
6. Point system. You will receive points for your actions. When you reach 100 points, a check mark will appear next to your profile name.
7. Discover page. You can discover and filter posts.
8. When you enter the profile of other members, you can see what posts they have liked and what comments they have made recently.
9. You can change your profile image, bio and username.

Frontend:

NextJS (React), TailwindCSS, Redux.

Backend: Express, PassportJS, mongoose

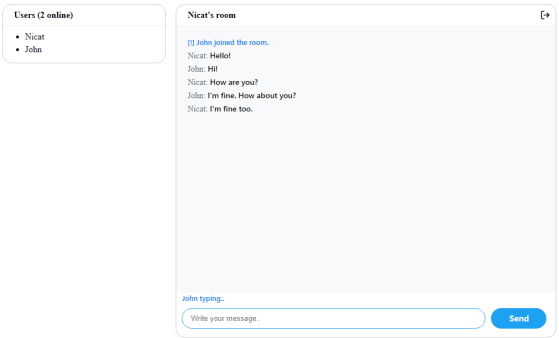


Chat App (click to see source code)

A simple chat application I developed while learning VueJS. By entering your name and the name of the room you want to join, you can message the members in that room.

Frontend: Vue, SocketIO.

Backend: Express, SocketIO.

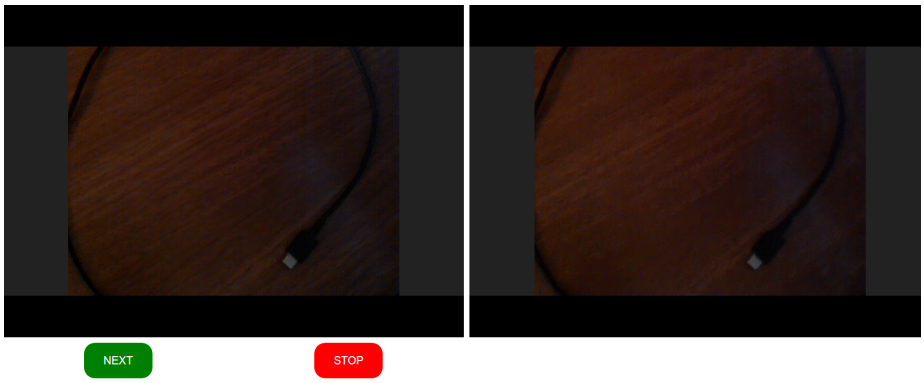


Omegle Clone (click to see source code)

It is a Omegle clone. You are talking with random people. It works like Omegle.

Frontend: React, PeerJS.

Backend: Express, SocketIO.



Reddit Clone (click to see source code)

It is a Reddit homepage UI clone. I made this to improve my HTML, CSS and Javascript skills.

Frontend: React, styled-components.

Twitter Clone (click to see source code)

It is a Twitter homepage UI clone. I made this to improve my HTML, CSS and Javascript skills.

Frontend: Vue
